

In the Specification:

Page 30, first complete paragraph, lines 11-17, replace with a new paragraph as follows:

- - When diaphragm 15 of micro-diaphragm pump 4 bulges out upwardly the pump draws in liquid through line 3 in the ~~inlet~~ non-return valve 14a. Subsequently, diaphragm 15 is moved back to the initial position which is shown and liquid is pressed into line 5 and pressure chamber 10 through non-return valve[[14]] 14a with the liquid prevented from existing into line 3. Subsequently, the piezoelectric actuator 17 causes an abrupt size reduction of pressure chamber 10 and the liquid is expelled through nozzle 7. - - .
